

PRGT Opportunities

**Nisga'a citizens and businesses are busy working on PRGT...
with plans to hire more!**

- **4 Nisga'a contractors**, plus several joint ventures with Nisga'a Villages and Nisga'a Growth Corp
- **\$30 million** in contracts to Nisga'a businesses
- To date, approx. **32 Nisga'a citizens** have been hired
- At 30%, Indigenous participation in PRGT construction is **well ahead** of other major projects in northern B.C.

Nisga'a citizens interested in working on the PRGT project should send an email to:
opportunity@nisgaanation.ca

PRGT Construction Update

- As of September 14, construction work in the Nass Valley is over 30% complete.
- Workers are starting to move into housing at Nass Camp —taking traffic off the roads. The Nass Camp housing complex is called “Sga Sgin’ist”
- Workers are receiving reminders about right of way on one-way bridges in response to community feedback.

“Good to know!”

1. While putting in bridges, PRGT cleaned up streams so fish can move through more easily.
2. PRGT stopped building during heavy rains in September to keep everyone safe and prevent soil from washing into fish streams.

PRGT crews safely relocating fish.

PRGT Rumour vs. Reality

Rumour

Reality

Nisga'a members don't support PRGT or Ksi Lisims LNG.

An NLG survey of over 1000 Nisga'a members shows over **80% support**.

Water is being taken from Nisga'a streams for Nass Camp.

Water is being trucked in for camp from Terrace.

PRGT will cost the Nisga'a Nation \$55 Billion.

Money to build these projects comes from investors. **No NLG funds are at risk**. The Nation expects significant revenue from both PRGT and Ksi Lisims LNG.

Pipeline stream crossings destroy fish habitat.

Research shows we can **completely avoid harms to fish** by using leading technologies and methods to carefully cross fish habitat.

Pipeline companies are trying to divide Indigenous people.

The Nisga'a Nation owns and is building this project. PRGT has the support of the **vast majority of nations** along the route.

These projects would raise gas and electricity bills.

There is no evidence to support this claim. Because of these projects, Nisga'a citizens are going to get better, **more reliable electricity service**.
